Education:

PhD - Prosthodontics (general grade A-)

[Faculty of Dentistry, Cairo University: February 2017]

Thesis Title: The Effect of Bone Morphogenetic Protein (BMP) on Implant Stability and Bone Height in Immediately Loaded Implant Supported Mandibular Over denture (Randomized Clinical Trial)

Aim of the work:

The aim this study is to compare and evaluate the implant stability and bone height of two different surfaces topography in immediately loaded implant supported mandibular overdentures

- 1- Conventional titanium dental implant coated with ready-made Bone morphogenetic protein (BMP).
- 2- Conventional titanium dental implant surface.

MS - Prosthodontics

[Faculty of Dentistry, Cairo University, Egypt: September 2008- November 2011]

Thesis Title:" Biocompatibility of Nanotite Implant on Delayed Loaded Implant - Supported Mandibular over Dentures in vivo study"

Aim of the work:

The aim of my master research work is to compare and evaluate the biocompatible effect of two different types of implants on delayed loaded implant-supported mandibular over dentures:

- 1-The discrete crystalline deposition (DCD) of Nano scale calcium phosphate implant surface. (Nanotite surface) implant.
- 2-Conventional titanium dental implant surface

BS - Oral surgery and dental medicine (Grade: very good -Honors)
