

The 5th Scientific International Conference, Faculty of Veterinary Medicine, Kafrelsheikh University

Call for paper

Participants are invited to submit full papers to the vice dean for Post-Graduate and Research and an electronic copy to the email mayh1167@yahoo.com or momara79@yahoo.com or mohrizk73@yahoo.com before the deadline (15/1/2019). The full paper should be prepared using MS word, Font 12, double space, not more than 6000 words and 300 words of the abstract, not more than five tables and/or figures. All the accepted manuscripts will be published in a special issue of the Slovenian Veterinary Research Journal (IF: 0.25, SJR: 0.14, **Indexed in ISI and Scopus**).

Publication Ethics

Ethics of experimentation

The Journal will only accept manuscripts in which there is evidence of the ethical use of animals or harmful substances. The care and use of experimental animals must comply with all relevant local animal welfare laws, guidelines and policies, and a statement of such compliance should be provided upon submission. Editors reserve the right to reject papers if there is doubt as to whether appropriate procedures have been used.

Plagiarism

The manuscript is checked on submission by iThenticate, in case of similarity index more than 25%, the Editor contact the corresponding author with the plagiarism report to adjust and reform the plagiarized texts. **The fees for Plagiarism will be 10 Euro which will not be refunded even the paper was not accepted.** The re-submitted edited manuscript is then re-checked and if the similarity index is not satisfactory, the Editor will contact other authors until obtaining the required similarity index.

Organization of the Manuscript

Articles should be typed double spaced using twelve point Times New Roman.

Layout of Manuscripts

Title Page:

The Title Page is submitted separately from the manuscript during the online submission. The title page should include the title of the manuscript as well as the full names and institutional affiliations for all authors. The corresponding author should also be indicated (provide address and email).

Title: The title should contain no more than **150 characters** (including spaces) and should be specific to the study. It should be comprehensible to a broad spectrum of readers.

Running Title: Should not exceed **40 characters**.

Authors and Affiliations: This section should include the first names, middle initials (if used), surnames, and affiliations (university or organization), department, city, state/province (if applicable), and country for all authors. The institution/laboratory where the work was conducted should be indicated. One of the authors should be designated as the corresponding author. Full contact details including postal address, telephone and fax numbers, and email address for the corresponding author must be provided.

The Manuscript: The names and affiliations of the authors should **NOT** be included in the manuscript file.

Abstract The abstract must be **not less than 150 words and should not exceed 300 words**. Citations, tables and abbreviations should be avoided. The techniques used must be mentioned without going into methodological detail and the most important findings should be summarized.

Key words

The authors must provide **3-5 keywords separated by semicolons or commas**.

Introduction The introduction should be concise and be written in a way understandable to researchers without specialist/expert knowledge in the area. Relevant controversies or disagreements in the field should be mentioned. The introduction should conclude with a comment about the overall aims of the study.

Materials and Methods

This section should include the study design, setting, materials involved, as well as a description of all interventions and comparisons. The authors should also provide a description of the type of statistical analysis used, including a power calculation when appropriate. Well-established methodologies should simply be mentioned and referenced appropriately. For new methods, the protocols for the method should be included. Generic drug names should generally be used and in cases where proprietary brands have been used, the brand names must be included in parenthesis. Where available, the accession numbers of any nucleic acid sequences and protein sequences cited in the manuscript and the corresponding database name should be provided. When referencing a manufacturer with reagents or equipment used, the city and country where the manufacturer is located should also be provided.

Results The results section should be written in past tense and should provide details of findings that are required to support the manuscript's conclusions. To enhance clarity, the section may be divided into subsections, each with a concise subheading. Where appropriate, results of statistical analysis should include analysis of relative/absolute risks and confidence analysis. Large datasets, including raw data, may be submitted as supporting files for publication as supplementary appendices. The author should refer to the Table/Figure number after the relevant description in the results section.

Discussion The discussion should clearly identify the main conclusions of the study. Authors should provide a clear explanation of the importance and relevance findings. Speculations on how the conclusions fit in or affect the existing assumptions or models should be explored. Suggestions for further key experiments for future work can be included. When

appropriate, issues related to resource limitations faced by the researchers during the course of the study, how these were addressed, and suggestions for improvement may also be included.

Conflict of interest

All authors should disclose any potential sources of conflict of interest. Any interest or relationship, financial or otherwise that might be perceived as influencing an author's objectivity is considered a potential source of conflict of interest. If the authors have no conflict of interest to declare, the authors must state "**None of the authors have any conflict of interest to declare.**"

Acknowledgments Those who have made substantial contribution to the study in terms of design, execution, and analysis or manuscript drafting/revision but do not fit the criteria for authorship should be mentioned in this section. It is the responsibility of the authors to ensure that those being acknowledged have agreed to being named in such capacity. The source of funding for the study should be stated in this section.

References

The journal uses the numbered citation method. The references must be listed and numbered consecutively in the order in which they appear in the text. Citations should be indicated by their unique reference number in brackets in the text. Where there are multiple citations within a single set of brackets these should be separated by commas without spaces. If there are three or more sequential citations, the numbers should be given as a range. Example: "..... (1, 6-8, 26)."

Reference format examples:

(1) Sinkora J, Rehakova Z, Sinkora M, Cukrowska B, Tlaskalova-Hogenova H. Early development of immune system in pigs. *Vet Immunol Immunopathol* 2002; 87: 301–6.

Abbreviations, Symbols and Nomenclature

All specifications must be stated according to the S.I. system. Concentrations of chemical solutions are to be given in mol/l. All other concentrations should be given in % (volume or weight). Any abbreviations of chemical, biological, medical or other terms should only be employed when it is certain that they are internationally known. The full name must be stated in brackets when the abbreviation is first used.

All biological, medical, chemical or other terms should be used according to the most recent recommendations of the respective international nomenclature. Enzymes should be given in I.U. (International Units), according to Enzyme Nomenclature (Elsevier Publishing Co., 1965). In the case of commercially obtained substances or reagents, when they are first mentioned in the text, the name and address of the manufacturer or supplier should be given as a footnote. Products (preparations etc.) with a registered trademark should be marked with. Bacterial names should be in accordance with the latest edition of Bergey's Manual of Determinative Bacteriology (The Williams and Wilkins Co., Baltimore). Viruses are to be given the classification and names recommended by the International Committee on the Nomenclature of Viruses. Names of micro-organisms and zoological names should be in italics in the manuscript.

Tables

Submit each table with its title, **in a separate word file**. Use Arabic numerals to number tables. Details of experimental conditions should be included in the table footnotes. Manuscripts must contain no more than five figures and tables in total. Tables must be prepared using the same word processing package as the manuscript text. Tables must not include ruled vertical or horizontal lines with the exception of headers and footers.

Example for Tables

Table 1:

Primer sequences and expected product sizes of the multiplex PCR

Gene	Primer sequence (5'→3')	Expected product size (bp)
<i>inlA</i> ¹	<i>inlA-Forward</i> ACGAGTAACGGGACAAATGC	800 bp
	<i>inlA-Reverse</i> CCCGACAGTGGTGCTAGATT	
<i>inlC</i> ²	<i>inlC-Forward</i> AATCCCACAGGACACAACC	517 bp
	<i>inlC-Reverse</i> CGGGAATGCAATTTTTCTACTA	
<i>inlJ</i> ³	<i>inlJ-Forward</i> TGTAACCCCGCTTACACAGTT	238 bp
	<i>inlJ-Reverse</i> AGCGGCTTGGCAGTCTAATA	

¹The *inlA* primers were intended for species-specific recognition, and the ² *inlC* and ³ *inlJ* primers were designed for virulence determination of *L. monocytogenes*.

Table 2:

Figures

Figure legends should follow the References in the manuscript file and the Figures should be in a separate electronic file (tif or jpg). They should be numbered consecutively using Arabic numerals (Figure1, Figure 2, Figure 3).

Potential Reviewers

It is mandatory during the online submission to provide the names, affiliations and email address of TWO potential reviewers. It is not guaranteed that the Editor In Chief will send the manuscript to these reviewers.
